

LEED Specification Sheet for New Construction and Major Renovation

7/2/2021

To Whom It May Concern:

This letter has been written to verify the VOC content of Titebond Acoustical Smoke & Sound Sealant. The current VOC content of this sealant is 45.75 g/L. This is less than the VOC content limits of California's South Coast Air Quality Management District (SCAQMD) Rule #1168 for All Other Architectural Sealants which has a VOC content limit of 50 g/L.

Additionally, Titebond Acoustical Smoke & Sound Sealant has passed California Department of Public Health CDPH/EHLB/Standard Method Version 1.2, 2017 testing (Emission testing method for CA Specification 01350). This is a requirement for obtaining LEED v4 low emitting materials credit.

These statements are based on the Titebond product referenced above and the formulation of the product and the requirements in place according to the date of this letter. Please use this letter for specification purposes and call 1-888-533-9043 with any further questions.

For a copy of the SDS or TDS please visit www.Titebond.com.
